Kolibri Games - Game Economy Designer

Dear Kolibri Games Team,

I take idle games apart for fun. I will be a few prestiges deep in one and catch myself reverse-engineering the curve instead of playing it: where is the sink, why did this reward land now, what holds a player who already has everything? That instinct is why I am writing about the Game Economy Designer role.

Rather than tell you I can do the work, I built it. I ran a full, self-directed economy-design study on Idle Bank Tycoon. Working in Excel and Google Sheets, I built a parameter-driven model (400+ live formulas) that surfaces the late-game problem: idle cash piling up to thousands of times the next upgrade's cost. Then I designed two live-ops levers for it, a hard-currency liquidity lock and income-scaled rewarded-ad tuning, each modelled in full with ROI and monetization math, a sensitivity grid, retention guardrails and an A/B plan. Together they land a blended ARPDAU lift of +15.5% (about \$2M/year at static DAU). If I had to sequence them, I would ship the ad tuning first and treat the loan as the bigger retention bet. The full study sits alongside this letter.

My route into economy design went through data: three years turning messy datasets into decisions across pharma, edtech and equity research. Games are where that analytical side and the design side finally meet for me. I also build and ship my own browser games on engines I wrote myself, so I am comfortable moving between the model and the code that runs it. And idle is honestly next on my own roadmap, with an idle tycoon and a single-player idle RPG as the two projects I most want to build.

I would love to bring that mix to the Idle Bank Tycoon team: the analytical rigour from years in data, a real feel for how these systems hold players, and a genuine love of the genre. Kolibri helped define idle games with Idle Miner Tycoon, and Idle Bank is the one I would most like to help push to its next milestones. Thanks for reading, and I would welcome the chance to talk it through.

Best regards,

Meriç Erler
